Running a campaign, step by step

How a project manager sets up a client, creates a campaign like the Christmas Event, moves each brand to go-live, and keeps the client and Telegram groups up to date. Every step below has a screenshot; click one to enlarge it.

T **Tee Chien Yap**
Project manager

A **Ah Fa**
Management · Telegram summaries

A **Aaron Tan**
Partner designer · can also create campaigns

Q **Quoc Bao**
Client · Orchid Lane Holdings

The basics in one minute

Four words and six colours are all you need.

Campaign

The big event, e.g. *Christmas Event*.

Feature

A game or function inside it, e.g. *Lucky Spin*, *Chest Open*.

Brand

One brand in one region, e.g. *EU9 (SG)*. Each belongs to a client.

Brand task

One feature for one brand. It has its own go-live time.

To do → In progress → Client testing → Scheduled → Live and On hold

Scheduled tasks go live by themselves at their go-live time. A feature is done when all its brands are live; the campaign is done when all its features are. On-hold tasks don't hold anything up.

1 · Set up a client (once)

Do this once per client. After that, every campaign can use their brands.

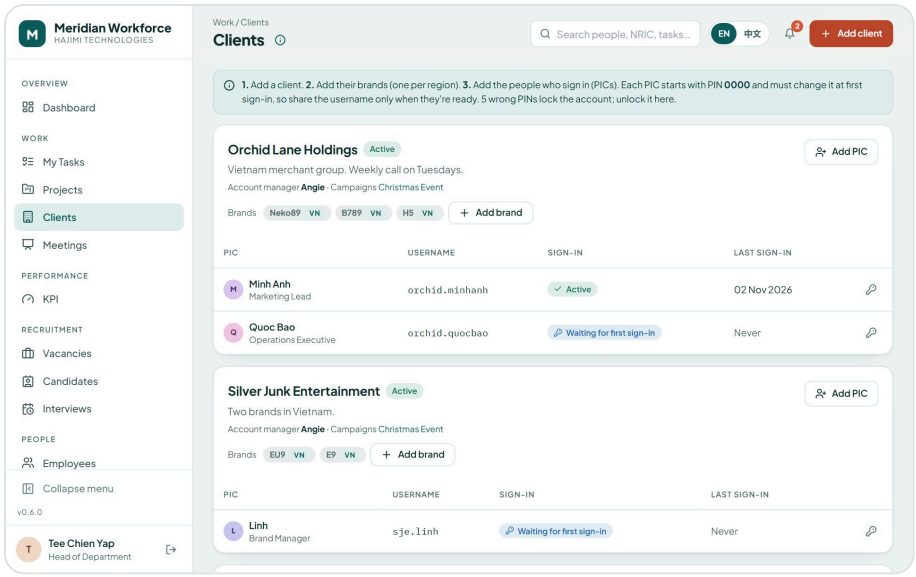

Step 1 of 2

PM · Tee Chien Yap

Add the client and their brands

Open **Work** → **Clients** and click **Add client**. Then click **Add brand** on the client and add one brand per region, e.g. **EU9 · VN**.

The same brand can run in different regions for different clients, so EU9 (VN), EU9 (SG) and EU9 (MY) can each belong to someone else.

Clients: each client, its brands and the people who sign in.

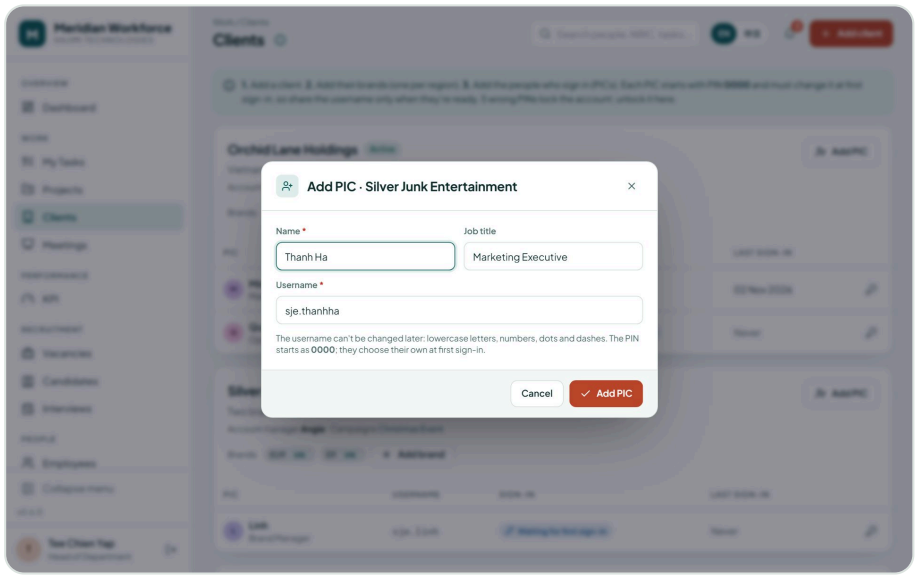

Step 2 of 2

PM · Tee Chien Yap

Add the people who sign in (PICs)

Click **Add PIC**, enter their name and a username. Their PIN starts as **0000**; they choose their own at first sign-in.

Send the username only when they're ready to sign in. 5 wrong PINs lock the account; click **Unlock** on their row. The key icon resets a forgotten PIN to 0000.

Add PIC: a fixed username and a starting PIN of 0000.

2 · Create a campaign with the wizard

Click **New campaign** on the Projects page or on the dashboard checklist. Five short steps build every feature and brand task for you.

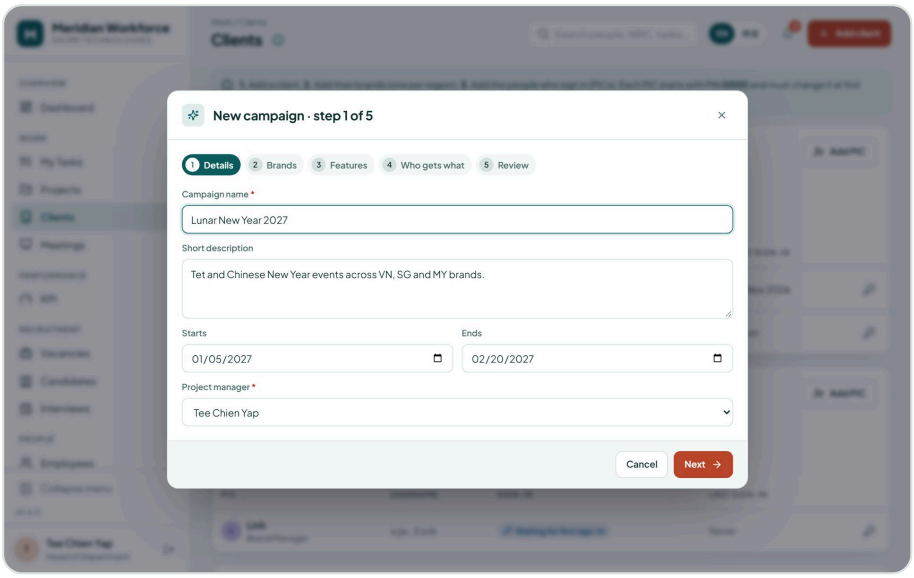

Step 1 of 5

PM · Tee Chien Yap

Details

Name the campaign, add a short description and the dates, and pick the project manager.

Partner designers like Aaron can create campaigns too, but only for the clients their company works with.

Step 1: the basics.

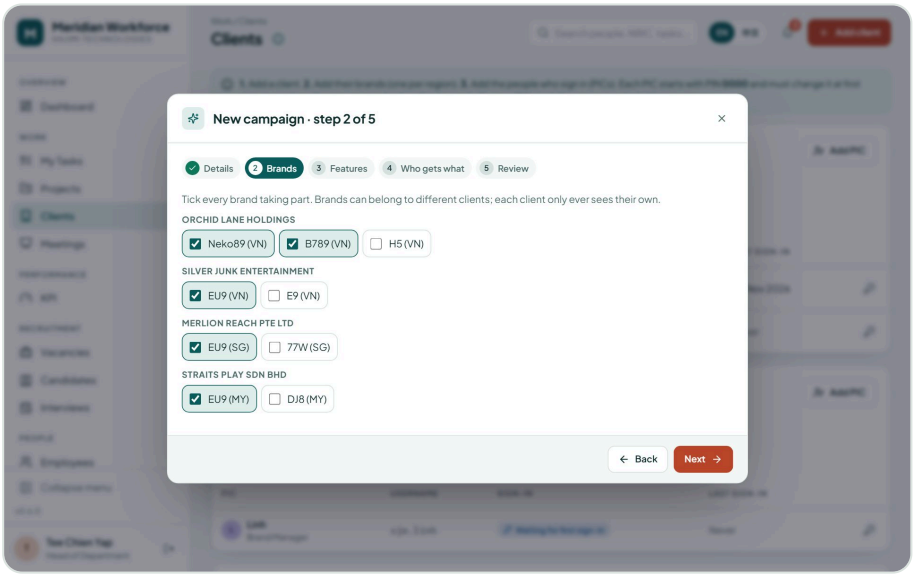

Step 2 of 5

PM · Tee Chien Yap

Brands

Tick every brand taking part. They're grouped by client.

Each client will only ever see their own brands.

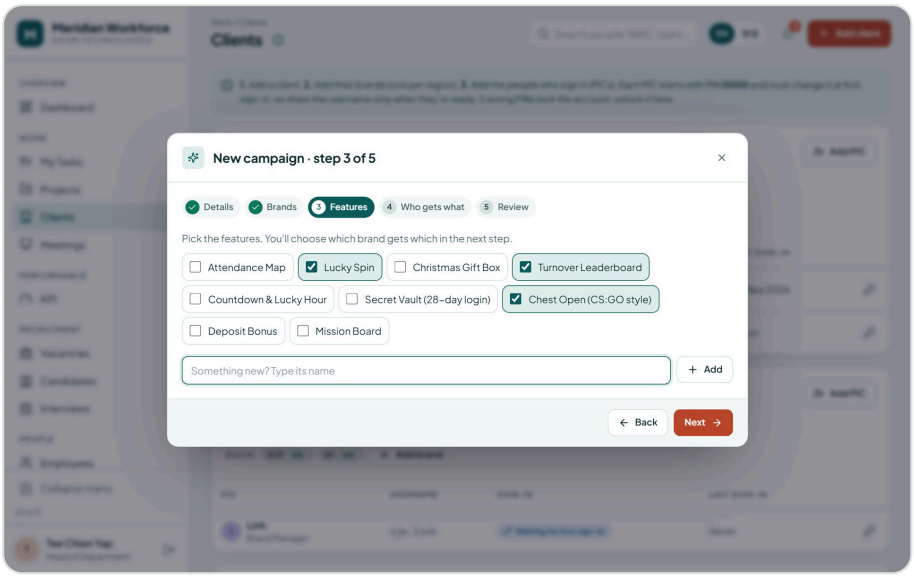

Step 2: pick the brands.

Step 3 of 5

PM · Tee Chien Yap

Features

Pick features from the list, or type a new one and click **Add**.

Step 3: pick the features.

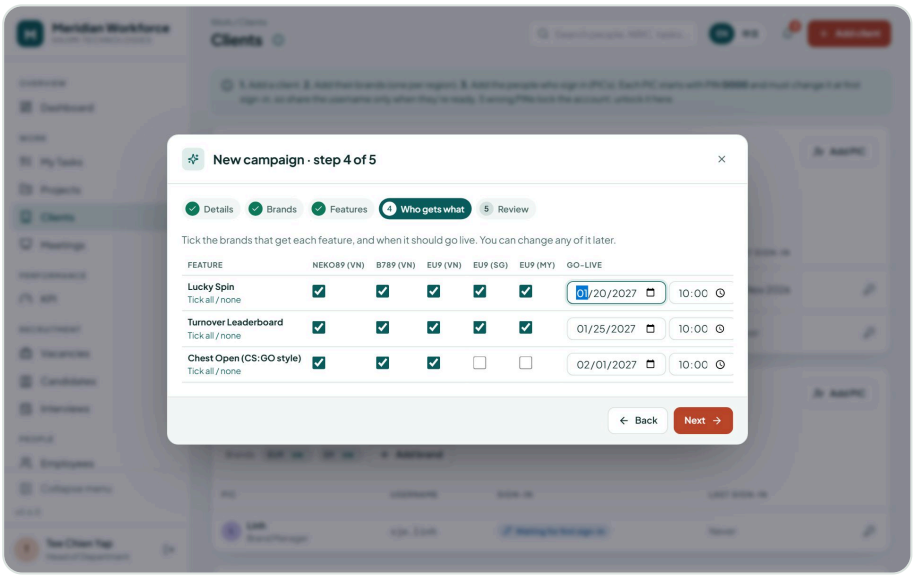

Step 4 of 5

PM · Tee Chien Yap

Who gets what

Untick any brand that doesn't get a feature, and set each feature's go-live date and time.

Here Chest Open goes to the three VN brands only. You can change any date later, brand by brand.

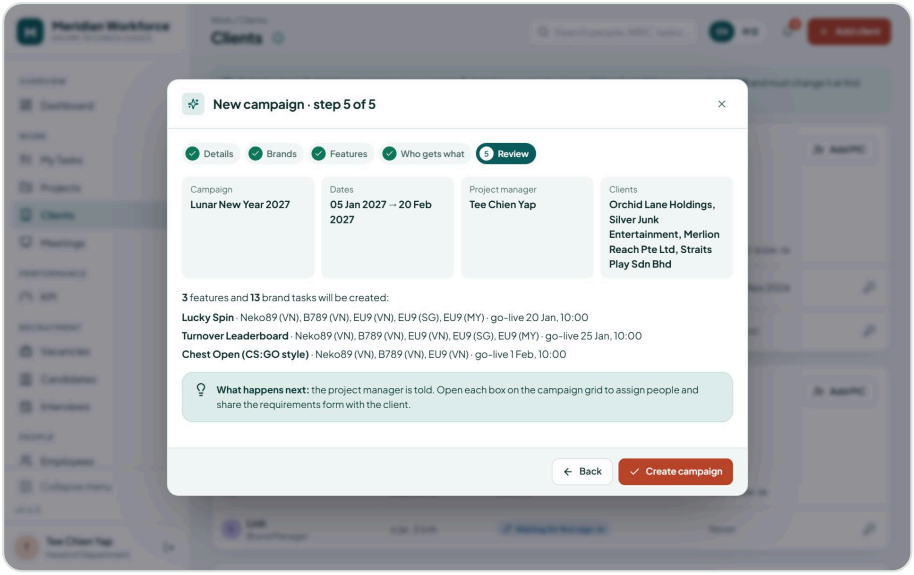

Step 4: tick who gets what, and when.

Step 5 of 5

PM · Tee Chien Yap

Review and create

Check the summary and click **Create campaign**. The project manager is told straight away.

Step 5: one last look.

3 · Day to day

Everything happens on one grid: features down the side, brands across the top.

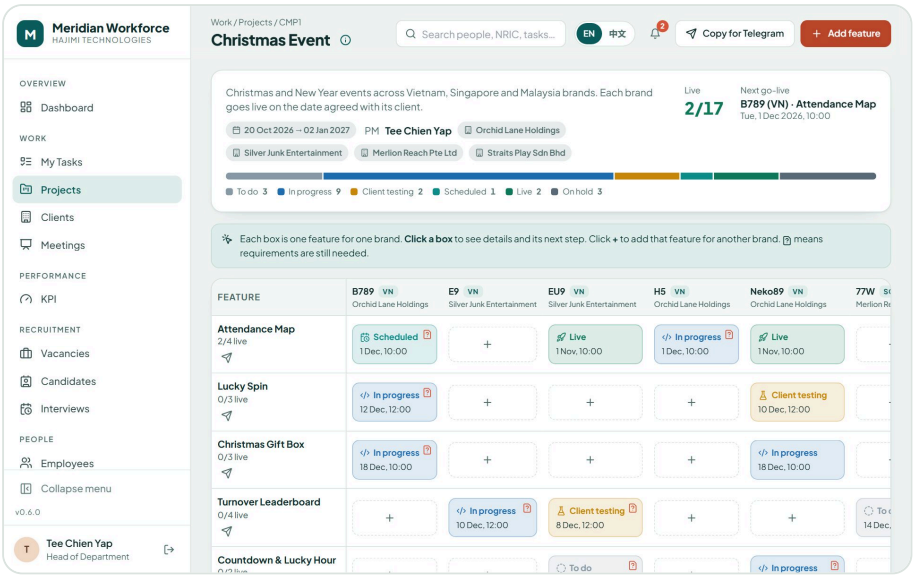

Step 1 of 6

PM · Tee Chien Yap

Read the grid

Each box is one feature for one brand, coloured by its status, with its go-live date. A small page icon means the client hasn't given requirements yet.

The bar at the top shows the whole campaign at a glance. Click **+** in an empty box to add that feature for another brand.

The Christmas Event grid.

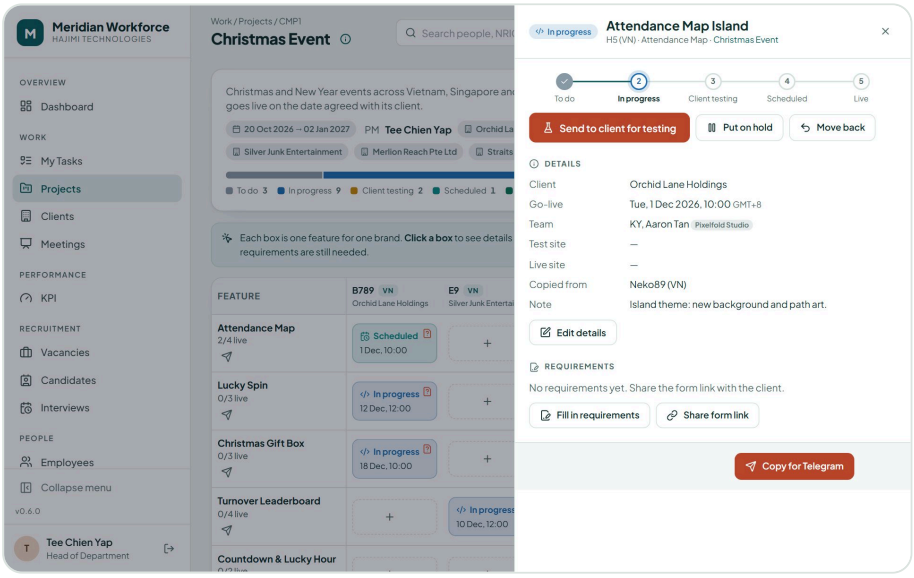

Step 2 of 6

PM or the person doing the work

Click a box, press the next step

Every task has one big button for its next step: **Start work → Send to client for testing → Schedule go-live → Mark live**.

Need to pause? **Put on hold** and say why. Pressed by mistake? **Move back**.

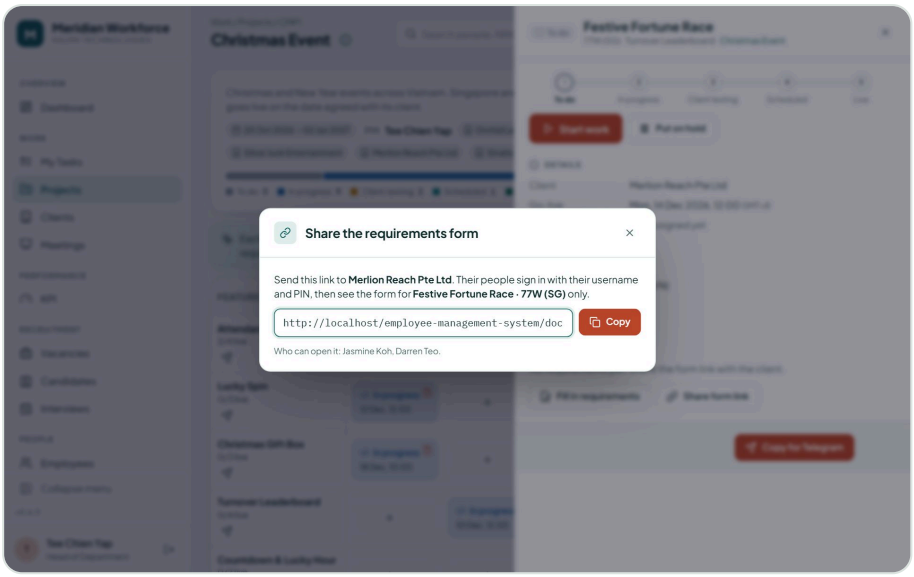

One button for the next step.

Step 3 of 6

PM · Tee Chien Yap

Ask the client for requirements

In the task, click **Share form link** and send the link to the client. They sign in and fill in the form for that brand only.

Share the requirements form.

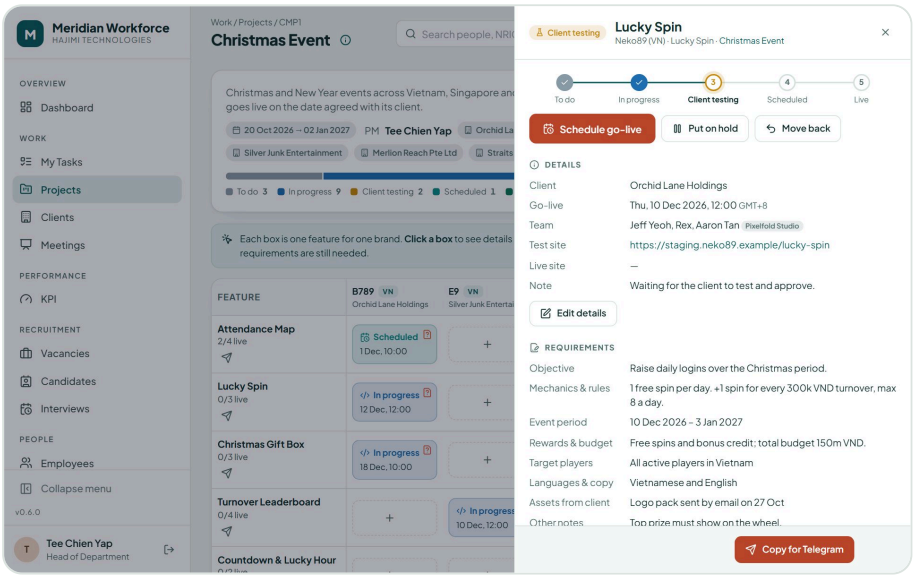

Step 4 of 6

PM · Tee Chien Yap

Schedule the go-live

After the client approves the test site, press **Schedule go-live** and confirm the date and time. At that moment it turns **Live** by itself.

The client's approval shows in the task, with their name and the time.

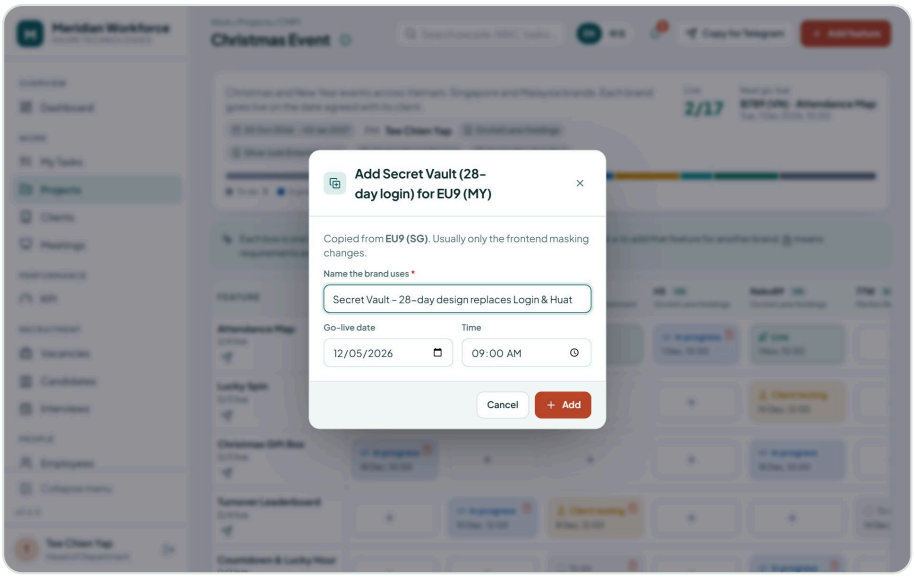

Client testing → Schedule go-live.

Step 5 of 6

PM · Tee Chien Yap

Reuse a feature for another brand

Built Chest Open once? Click **+** in the empty box for the next brand. It copies the name, team and (if you like) the requirements, so only the frontend masking changes.

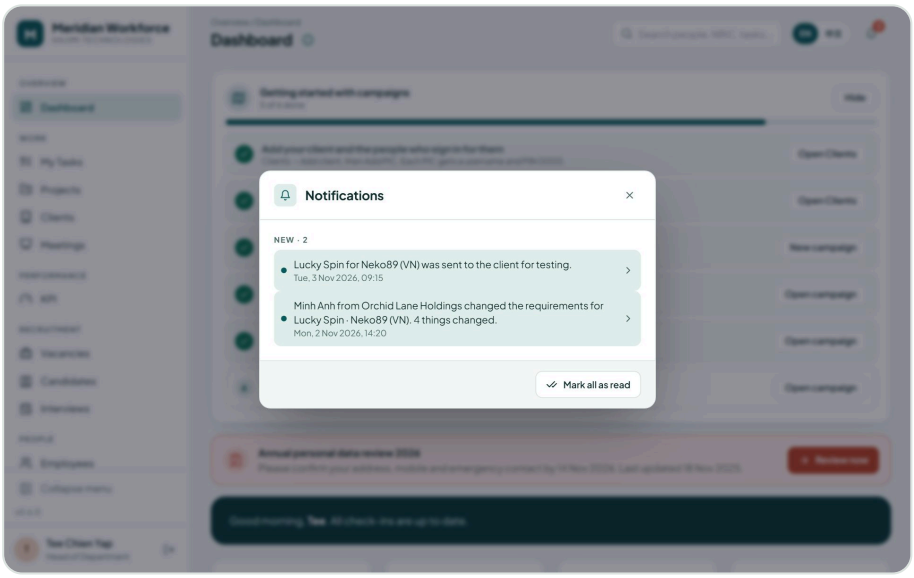

Copy a feature to another brand.

Step 6 of 6

Everyone

Watch your notifications

The bell shows a count when something changes for you: you're added to a task, a date moves, the client changes requirements, or something goes live.

Notifications in plain words.

4 · What the client does

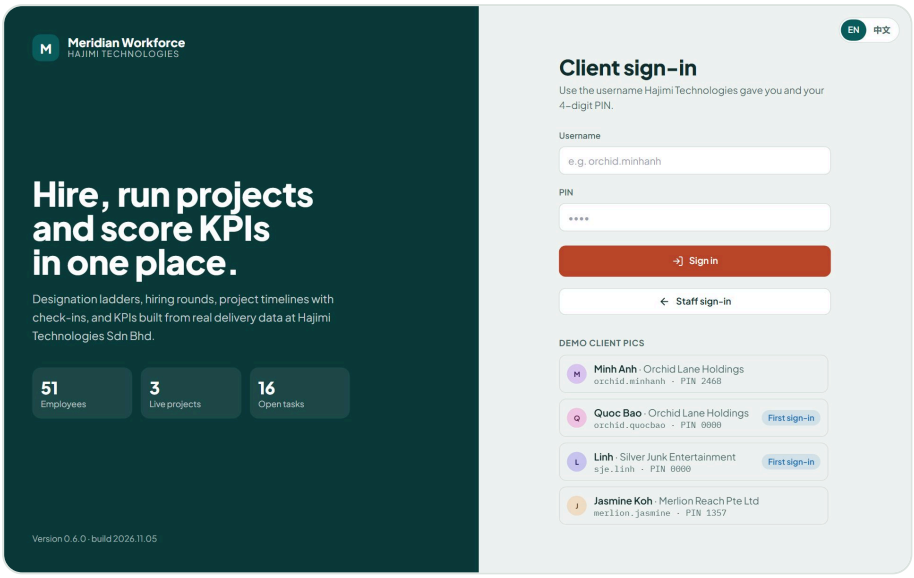

Clients see a simple version: only their own brands, and one button for each thing they need to do.

Step 1 of 5

Client · Quoc Bao

Sign in with username and PIN

The form link opens the client sign-in. They enter the username you gave them and their 4-digit PIN.

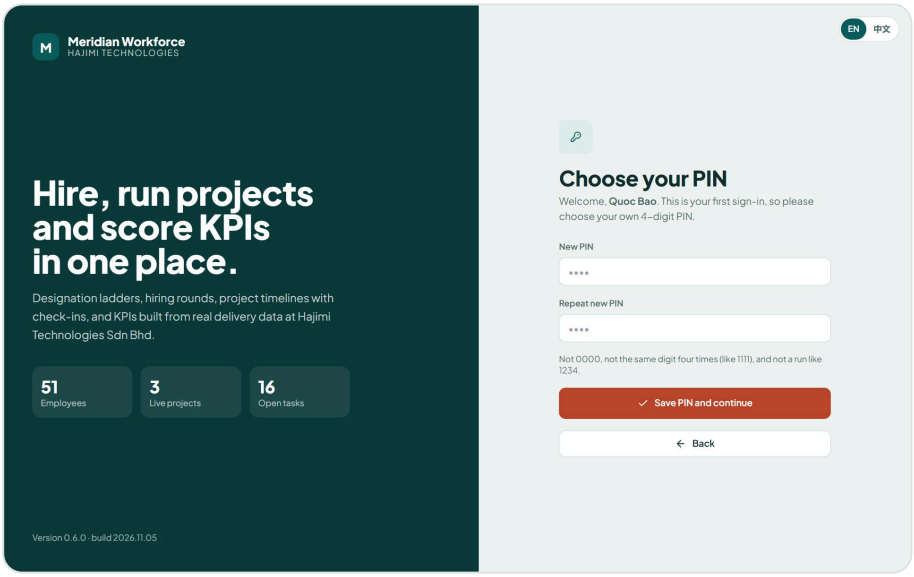

Client sign-in.

Step 2 of 5

Client · Quoc Bao

Choose their own PIN (first time only)

With the starting PIN 0000, they must pick their own before going on. Easy PINs like 1111 or 1234 are refused.

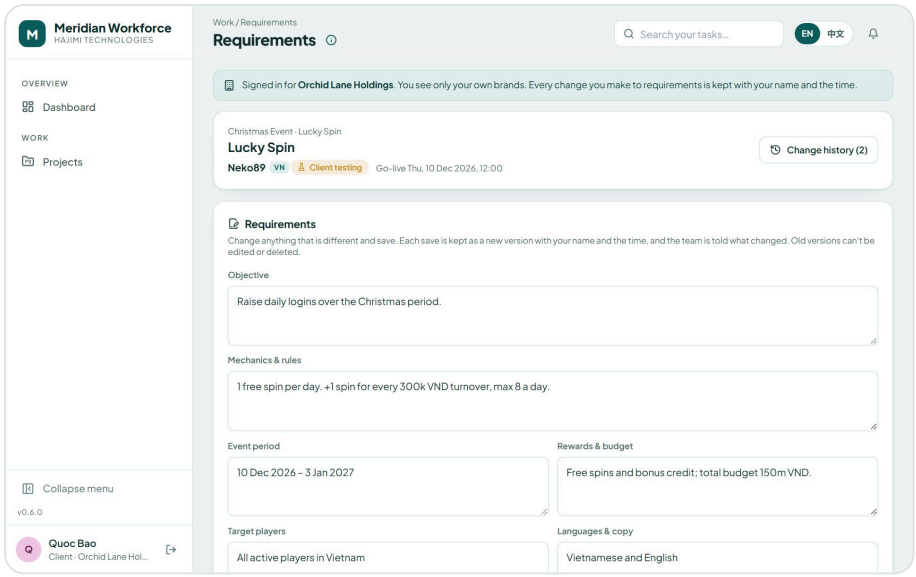

First sign-in: choose a PIN.

Step 3 of 5

Client · Quoc Bao

Fill in the requirements

They change what's needed and click **Save**. Each save is kept as a new version with their name and the time, and your team is told what changed.

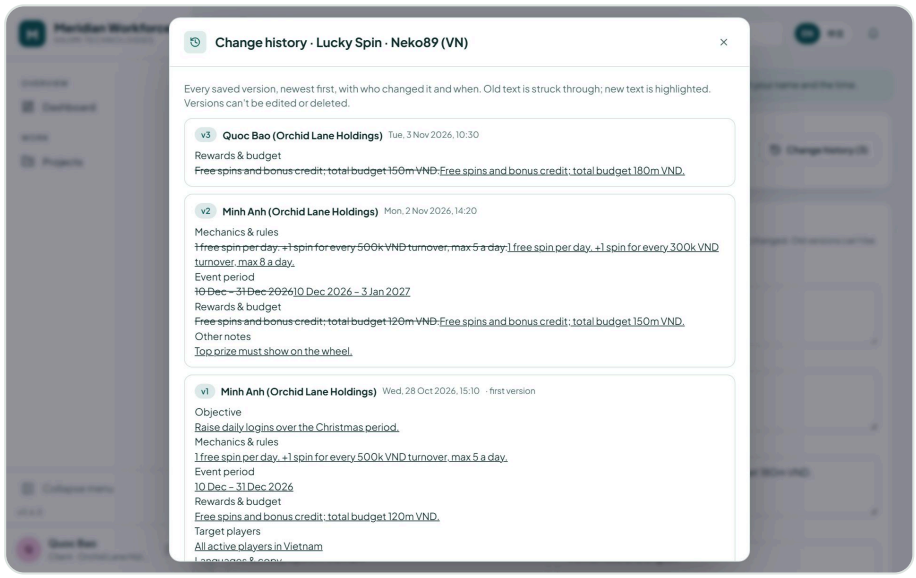

The requirements form.

Step 4 of 5

Everyone

See exactly what changed

Change history lists every version, newest first: old text struck through, new text highlighted. Versions can't be edited or deleted, so both sides have a clear record.

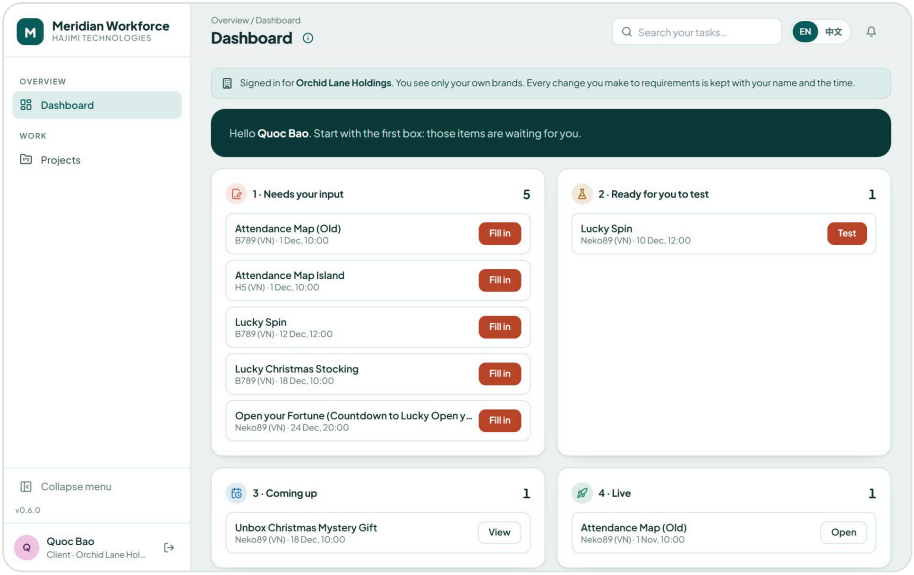

The record that protects everyone.

Step 5 of 5

Client · Quoc Bao

Their dashboard: four boxes

1 · Needs your input, **2 · Ready for you to test**, **3 · Coming up** and **4 · Live**. To test, they open the test site and press **Looks good, approve** or **Ask for changes**.

The client's dashboard.

5 · Keep Telegram up to date

Copy a formal update by hand, or let Meridian send summaries on a schedule.

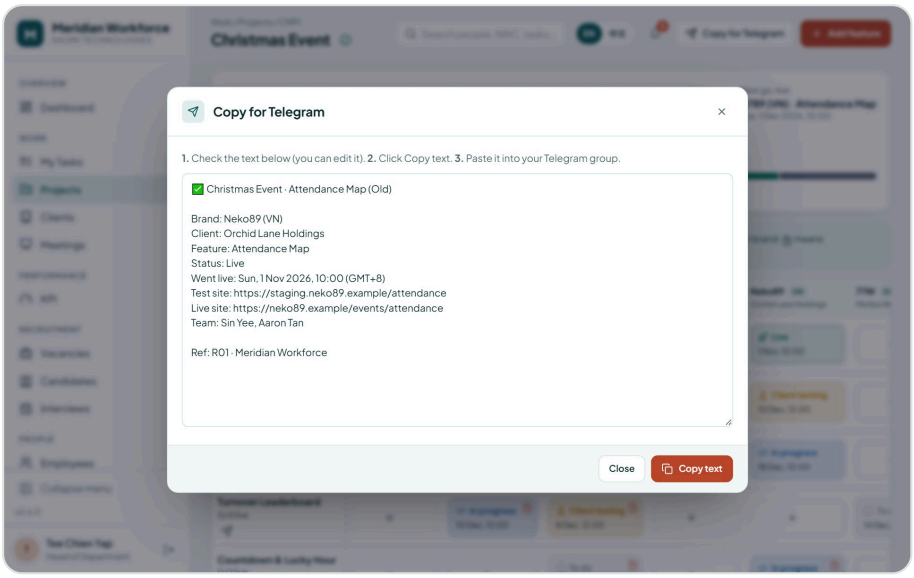

Step 1 of 3

PM · Tee Chien Yap

Copy an update by hand

Click **Copy for Telegram** on a task, a feature or the whole campaign. Check the text, click **Copy text**, and paste it into your group.

It includes the brand, client, status, go-live time, test and live links, and the team.

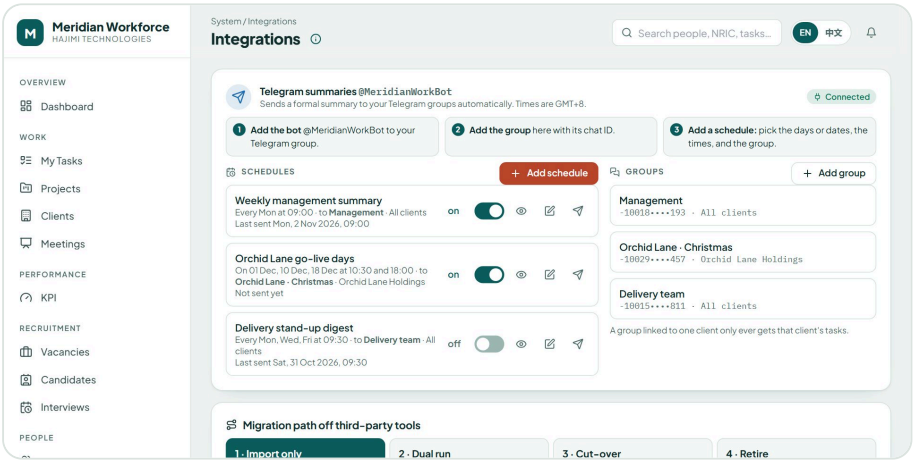

A formal update, ready to paste.

Step 2 of 3

Management · Ah Fa

Connect your groups

In **System → Integrations**: add the bot to your Telegram group, then add the group here. A group can be limited to one client.

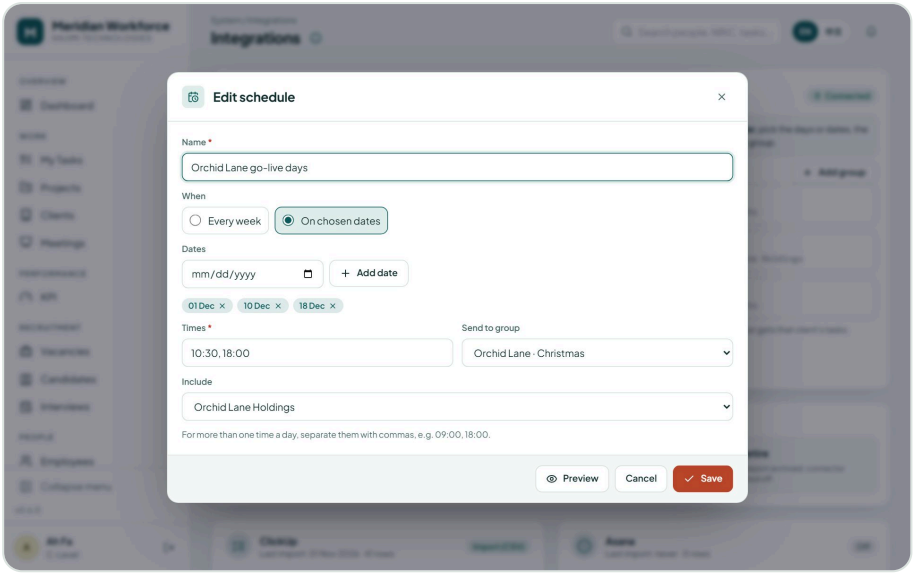

Telegram summaries in Integrations.

Step 3 of 3

Management · Ah Fa

Set a schedule

Choose **Every week** (pick the days) or **On chosen dates**, one or more times a day, the group, and which clients to include. Use **Preview** to see the message first.

Go-live days at 10:30 and 18:00.

Cheat sheet

- **New client:** Clients → Add client → Add brand → Add PIC.
- **New campaign:** Projects → New campaign → 5 steps.
- **Move work along:** click a box on the grid → press the big button.
- **Same feature, another brand:** click **+** in its empty box.
- **Get requirements:** click a box → Share form link.
- **Tell Telegram:** Copy for Telegram, or set a schedule in Integrations.

Screenshots from the HTML mockup (docs/design/meridian-mockup.html) with demo data. Client companies and PIC names are fictional; brand names come from the Christmas Event sample list.
